

Capilube Machined type Needle Roller bearing is newly available.

Capilube Bearings with solid lubricant oil Machined type Needle Roller bearings and Cam Followers

CAT-5943

Capilube Bearings with solid

IKO Capilube bearings are bearings that are pre-packed with thermosetting solid lubricant (Capilube) in the bearing space. Capilube is a lubricant made by thermosetting a large amount of oil and fine particles of ultra high molecular weight polyolefine resin. As the bearing rotates, the lubricating oil oozes out onto the raceway in proper quantity, keeping the lubrication performance for a long period of time.

Feature of **IKO** Capilube bearings

Maintenance work can be reduced greatly

Work for lubrication control can be reduced by a good lubrication performance kept by pre-packed solid type lubricant.

Best suit for oil free environment applications

No oil scattering makes any pollution in the ambient environment.

Best remedy for grease loss

Best solution for grease loss at hard-to-grease positions by the restriction of machine/equipment structure.

Capilube Machined type Needle Roller bearings

Many needle rollers are arranged at a small spacing pitch, and can make bearing sectional height very low. It is the most suitable to oscillating motions.

lubricant oil

Applications

Most suitable for applications of printing machines, food-manufacturing machines, liquid crystal/semiconductor manufacturing equipment, various types of washing line, various types of transport lines, etc.

Crowned outer ring
is effective in moderating the edge load due to mounting errors.

Thrust disk
is effective in supporting unexpected thrust load due to mounting errors.

With hexagon socket hole
for easy mounting

Capilube Cam Followers

Cam Follower is the best bearing for cam mechanism and linear motion and has high rigidity and high accuracy.

With a pre-packed solid type lubricant, the lubrication performance can be kept for a long time.

[Capilube Bearings with solid lubricant oil] Machined type Needle Roller bearings

IKO Capilube Machined type Needle Roller bearing is a needle roller bearing that is pre-packed with thermosetting solid lubricant (Capilube) in the bearing space. As the bearing rotates, the lubricating oil oozes out onto the raceway in proper quantity, keeping the lubrication performance for a long period of time.

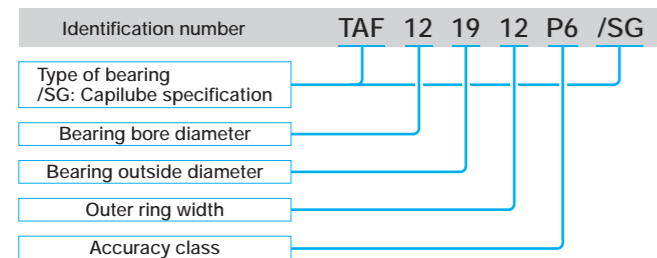

With a low sectional height, it can have large load ratings.

Machined outer ring has superior rigidity and can be fitted into light alloy housing.

Identification number

The identification number example of IKO Capilube Machined type Needle Roller bearing is shown.

Basic dynamic load rating

The basic dynamic load rating is defined as the constant radial load acting along the bearing central axis that allows a basic rating life of 1,000,000 revolutions.

Basic static load rating

The basic static load rating is the static load that gives the contact stress reaches 4,000Mpa at the center of the contact area of the rolling elements and the raceway receiving the maximum load.

Accuracy

The accuracy of IKO Capilube Machined type Needle Roller bearings conforms to JIS B 1514:2000 (Tolerances of Rolling Bearings), and the dimensional accuracy and rotational accuracy are specified. Representative tolerances of outer ring are shown in Table 1 and the tolerances for the smallest single roller set bore diameter is shown in Table 2.

Table 1 Tolerance for outer ring

D Nominal bearing outside diameter mm	ΔD_{mp} Single plane mean outside diameter deviation								ΔC_s Deviation of a single outer ring width							
	Class 0		Class 6		Class 5		Class 4		Class 0		Class 6		Class 5		Class 4	
	High	Low	High	Low	High	Low	High	Low	High	Low	High	Low	High	Low	High	Low
18	22	0	-9	0	-8	0	-6	0	-5	0	-120	-120	0	-40	0	-40
22	30	0	-9	0	-8	0	-6	0	-5	0	-120	-120	0	-80	0	-80
30	50	0	-11	0	-9	0	-7	0	-6	0	-120	-120	0	-120	0	-120
50	80	0	-13	0	-11	0	-9	0	-7	0	-120	-120	0	-120	0	-120

Table 2 Tolerances for the smallest single roller set bore diameter $F_{ws \min}^{(1)}$

F_w Nominal roller set bore diameter mm	$\Delta F_{ws \min}$ Deviation of the smallest single roller set bore diameter μm	
	Over	Incl.
10	18	+27
18	30	+33
30	45	+41

Note (1): This is the diameter of the cylinder used instead of the inner ring, where the radial clearance becomes zero at least in one radial direction.

Design of shaft and housing

IKO Capilube Machined type Needle Roller bearings does not have inner ring so that the shaft can be used directly as the raceway surfaces. Shaft and housing according to specification in Table 3 are recommended.

Table 3 Specification of shaft and housing

Item	Shaft	Housing
Roundness	$0.3 \times IT6^{(1)}$ or $0.3 \times IT5^{(1)}$	$0.3 \times IT7^{(1)}$ or $0.3 \times IT6^{(1)}$
Cylindricity	$0.3 \times IT6^{(1)}$ or $0.3 \times IT5^{(1)}$	$0.5 \times IT7^{(2)}$ or $0.5 \times IT6^{(2)}$
Surface roughness	$0.2 \mu m R_a^{(3)}$	$1.6 \mu m R_a$
Hardness	58 ~ 64HRC ⁽⁴⁾	-

Note (1): 30% or less of the dimensional tolerance for the shafts or housing bores is recommended.

(2): 50% or less of the dimensional tolerance for shafts or housing bores is recommended.

(3): When required accuracy is not critical, a surface roughness within $0.8 \mu m R_a (3.2 \mu m R_z)$ is allowable.

(4): An appropriate depth of the hardened layer is required.

Allowable rotational speed

The allowable rotational speeds of IKO Capilube Machined type Needle Roller bearings are affected by mounting and operating conditions. Recommended d_{mn} value⁽¹⁾ is less than 20,000 under pure radial load condition. Under actual usage, d_{mn} value is recommended to be less than 2,000 due to unexpected axial load.

Note (1):

Value $d_{mn} = (\text{Bearing bore dia. [mm]} + \text{Bearing outside dia. [mm]}) / 2 \times \text{Number of revolution [rpm]}$

Fit

The recommended fits for IKO Capilube Machined type Needle Roller bearings are shown in Table 4 to 5.

Table 4 Fit between IKO Capilube Machined type Needle Roller bearings and housings

Load condition	Tolerance class of housing	
	Normal load	Light load, Fluctuating load
Rotating load on outer ring	N 7 ⁽¹⁾	M 7
Directionally indeterminate load	Normal load	K 7
	Light load, normal load	J 7
Stationary load on outer ring	Light load, normal load	H 7
	With heat conduction through shaft	G 7
With light or normal load, especially accurate rotation and high rigidity are required.		K 6

Note (1): Care should be taken so that the radial internal clearance is not too small.

Remark 1: This table applies to steel or cast iron housings. For lighter metal, a tighter fit should be selected. For split housings, do not use a fit tighter than J7.

2: Light load and normal load represent $P < 0.06C$ and $0.06C < P < 0.12C$, respectively, where P is the dynamic equivalent radial load and C is the basic dynamic load rating of the bearing to be used.

Table 5 Tolerance of the shafts

Radial internal clearance	Tolerance class of shaft
Smaller than CN clearance	k 5
CN clearance	h 5
Larger than CN clearance	g 6

Remark: When the housing bore fit is tighter than K7, the shaft diameter is made smaller by considering shrinkage of roller set bore diameter after mounting.

Mounting

- Mounting dimension for IKO Capilube Machined type Needle Roller bearings are shown in the dimension table.
- When mounting IKO Capilube Machined type Needle Roller bearings, pay attention to avoid locating the oil hole of the inner ring within the loading zone. This may lead to a short bearing life.

Caution for use

- Never wash bearing with organic solvent and/or white kerosene, which have the ability to remove fat.
- To ensure normal rotation of the bearing, apply a load of 1% or more of the dynamic load rating at use.
- The operating temperature range is -15 to +80°C. For continuous operation, the recommended operating temperature is +60°C or less.
- When using two or more IKO Capilube Machined type Needle Roller bearings adjacent to each other on the same shaft, it is necessary to obtain an even load distribution. On request, a set of bearings is available, in which bearings are matched to obtain an even load distribution.

Note (1) : Minimum allowable value of chamfer dimension r.

Remark : Bearing with a roller set bore diameter F_w of 26mm or less have no oil hole and oil groove. In others, the outer ring has an oil hole and an oil groove.

1N 0.102kgf

Example of identification number

[Pre-packed with solid type lubricant] Capilube Cam Followers

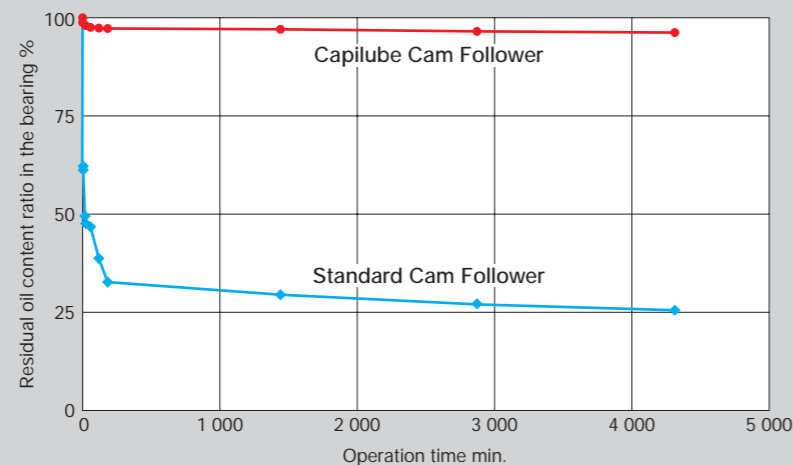

Cam Follower is bearing with a stud incorporating needle rollers in a thick walled outer ring. It has high rigidity and high accuracy and is suitable to cam and linear motion mechanisms.

IKO Capilube Cam Follower is a Cam Follower that is pre-packed with thermosetting solid lubricant (Capilube) in the bearing space.

The lubrication effect can be maintained in long time operation.
It contributes to "Maintenance free".

Rotational endurance test

Test condition
Test product
IKO Capilube Cal Follower: CF10/SG
IKO Standard Cam Follower: CF10
Rotational speed : 1,000rpm
Ambient temperature : Room temperature

Identification number

An example of identification number of IKO Capilube Cam Follower is shown.

Basic dynamic load rating

The basic dynamic load rating is defined as the constant radial load acting along the bearing central axis that allows a basic rating life of 1,000,000 revolutions.

Basic static load rating

The basic static load rating is the static load that gives the contact stress reaches 4,000Mpa at the center of the contact area of the rolling elements and the raceway receiving the maximum load.

Maximum Allowable Load

The applicable load on IKO Capilube Cam Follower is, in some cases, limited by the bearing strength, shear strength of stud, and strength of outer ring instead of the load rating of needle roller bearing, because the IKO Capilube Cam Follower is mounted in a cantilever position. Maximum allowable loads limited by the bending strength and shear strength.

Track capacity

The capacity is defined as the load which can be continuously applied on a IKO Capilube Cam Follower placed on a steel track surface without causing deformation and indentation (dent) on the track surface.

Accuracy

The accuracy of IKO Capilube Cam Follower is shown in Table 6. And the radial run-out of the outer ring is controlled 15µm in maximum.

	Outside diameter of outer ring D	Stud diameter d_1	Width of outer ring C
Tolerances	0 -50	h7	0 -120

Unit: µm

Clearance

The radial internal clearances of IKO Capilube Cam Follower are shown in Table 7.

Identification number	Radial internal clearance	
	Min.	Max.
CF 6 WBUUR/SG	5	20
CF 8 WBUUR/SG CF 10 WBUUR/SG CF 10-1 WBUUR/SG CF 12 WBUUR/SG CF 12-1 WBUUR/SG	5	25

Unit: µm

Remark: Values are applicable before the solid type lubricant is packed.

Fit

Mounting hole tolerance for stud is recommended to be H7 for IKO Capilube Cam Followers. In case it is supported in a cantilever position, the mounting hole diameter should be prepared without play between the stud and the mounting hole especially when heavy shock loads are applied.

Allowable rotational speed

The allowable rotational speeds of IKO Capilube Cam Follower are affected by mounting and operating conditions. Recommended $d_1 n$ value ⁽¹⁾ is less than 10,000 under pure radial load condition. Under actual usage, $d_1 n$ value is recommended to be less than 1,000 due to unexpected axial load.

Note ⁽¹⁾:
Value $d_1 n = d_1$ (Stud diameter [mm]) \times n (Number of revolution [rpm])

Mounting

1. Make the center axis of the mounting hole perpendicular to the moving direction of the IKO Capilube Cam Follower and match the side shoulder accurately with the seating surface indicated by dimension f in the table of dimensions. Then, fix the Cam Follower with the nut. Do not hit the flange head of the IKO Capilube Cam Follower directly with a hammer, etc. This may lead to a bearing failure such as irregular rotation or cracking.
2. The IKO mark on the flange head of the stud indicates the oil hole position on the raceway. Avoid locating the oil hole within the loading zone which may lead to a short bearing life. (See Fig.1)

3. When tightening the nut, the tightening torque should not exceed the value shown in the dimension table. If the tightening torque is too large, it is possible that the threaded portion of the stud will be broken. When there is a possibility of loosening, a special nut such as lock nut, spring washer, or self-locking nut should be used.

Caution for use

1. Never wash bearing with organic solvent and/or white kerosene, which have the ability to remove fat.
2. To ensure normal rotation of the bearing, apply a load of 1% or more of the dynamic load rating at use.
3. The operating temperature range is -15 to +80°C. For continuous operation, the recommended operating temperature is +60°C or less.
4. When the lubricant status is not enough between the outer ring and the mating track surface, seizure or wear may be occurred depending on the operating conditions. In particular, care must be taken for lubricating condition and contacting surface roughness in case high-speed cam mechanisms.

Stud dia. mm	Identification number	Mass (Reference) g	Boundary dimension mm												Mounting dimension f Min. mm	Maximum tightening torque N·m	Basic dynamic load rating C N	Basic static load rating C ₀ N	Maximum allowable load N	Track capacity ⁽¹⁾ N	Identification number

Note ⁽¹⁾ : Values in the table are applicable when the hardness of the mating track surface is 40HRC. When the hardness of the mating track surface differs from 40HRC, the track capacity is obtained by multiplying track capacity factor shown in Table 8.

1N 0.102kgf

Remark : Models with a stud diameter d₁ of 10mm or less has no oil hole. The others are provided with one oil hole each on the outside surface and end surface of the stud.

Table 8 Track capacity factor
